SUMMARY

01.

Frontend architect and technical leader specializing in React, TypeScript, and Next.js. Seven years building scalable frontend platforms, design systems, and shared infrastructure at AI-security and cybersecurity companies — establishing engineering standards, driving cross-team technical direction, and shipping reusable systems.

EXPERIENCE

02.

Staff Software Engineer

Nov 2023 – Jul 2026

HiddenLayer · Austin, Texas

- Architected and built the company's React design system in a Turborepo monorepo, establishing shared component, documentation, testing, and release workflows with Storybook across multiple product teams.
- Established frontend architecture standards and engineering patterns across multiple AI-security products post-Series A, serving as the primary decision-maker for the frontend technology stack.
- Led feature-flag architecture using OpenFeature and Flagsmith, enabling controlled rollouts and experimentation across products.
- Drove key architectural decisions around Next.js App Router, React Query, and TypeScript patterns — taking features from ideation through general availability.
- Established AI-assisted development workflows using Claude Code and Cursor for implementation, refactoring, testing, and architectural investigation across a TypeScript and Next.js codebase.

Lead Software Engineer

Jan 2020 – Aug 2023

Living Security · Austin, Texas

- Led frontend architecture across multiple product lines, defining shared development workflows for CMS integration, state management, client-side caching, and independently deployed micro-frontends.
- Owned frontend development for three product offerings directly attributed to \$3.6M in reported 2022 revenue, with additional contributions to a fourth product and churn-risk projects that resulted in agreed up-sales.
- Established frontend engineering process standards: Confluence documentation, Jest unit testing, Cypress end-to-end testing, and pull request templates adopted by the full team.
- Delivered cross-functional features in close collaboration with product and design, consistently shipping on schedule across multiple concurrent product tracks.

SELECTED PROJECTS

03.

Black Wall Street Journey Rick Lowe Exhibition application and public websites documenting Black Wall Street history through structured chapters, entries, quotations, statistics, and source citations. Next.js · Strapi · PostgreSQL · Amazon S3 · Vercel	The Blueprint When Where What Large-format event and activation platform serving ~80,000 registered users through high-volume seasonal traffic spikes. Implemented sponsor interaction analytics and a scalable content delivery model. Next.js · Strapi · PostgreSQL · Vercel
--	---

SKILLS

04.

FRAMEWORKS & LIBRARIES	React · Next.js · Node.js · Tailwind CSS · React Aria · TanStack
ARCHITECTURE & SYSTEMS	Design Systems · Frontend Architecture · Monorepo Workflows · Micro-frontends · Accessibility
LANGUAGES	TypeScript · JavaScript · HTML · CSS · Go
TOOLING	Git · GitHub · Turborepo · Storybook · Claude Code · Cursor · Figma · OpenFeature · Flagsmith
TESTING	Jest · Cypress · Playwright
DATA & BACKEND	PostgreSQL · Strapi · Amazon Web Services · Vercel · Terraform

EDUCATION

05.

General Assembly

Austin, Texas · 2019

Certificate, Software Engineering

Austin College

Sherman, Texas

BA, Fine Art & Popular Cultural Anthropology
Men's Soccer
